Freely programmable measuring instrument

The "mini LIGNO smart" is starting. The newest development in our house is acted a measuring instrument on the base of ours mini LIGNO devices. The new "smart" device can be tuned individually to the customer wish. From a big list the customer can choose up to 16 different species of wood or building material kinds on the device are struck up. The customer has to let adapt therefore the possibility a device especially on his needs. Now the sales of the new device is starting!
